

BY YOUR SIDE IN KEY MOMENTS

From the very beginning, we've built relationships with our clients that go far beyond transactions. Our goal is not only to work hand in hand with them, but above all to see them grow and reach their company's full potential. That's why, within our Industrial Relocation department, we're deeply committed to ensuring the smooth running of each new start - with more than 1,200 projects and 1,500 machines moved every year across industries such as food processing, pharmaceuticals, watch-making and automotive.

Precision down to the millimeter

Behind every move lies meticulous precision work. Our teams handle equipment weighing from a few hundred kilos to over 40 tons - always with skill and control. How? Thanks to our cranes, forklifts, hoists and soon new aerial work platforms. In short, we provide solutions tailored to every challenge.

With this approach, our 20 specialized employees don't just move machines - they anticipate, secure and coordinate every step. Their commitment allows them to cut production downtime by half, offering clients the peace of mind that comes with projects managed with rigor and, above all, trust. As Daniel Pillonel, Maintenance and Safety & Health Coordinator at Mestel, who recently used our services, puts it: "The von Bergen team first took the time to analyze all our machines on site, as well as the constraints related to their location. Their perfect command of

lifting equipment - cranes, forklifts, hoists - truly made the difference. Calm, efficient and reliable, they find a solution to every problem."

A growing service

To support our clients' evolving needs, we are strengthening our presence in Western Switzerland, particularly in Geneva and Fribourg. This year, our fleet is expanding with a City Liner, two 5-axle truck cranes with 92-ton-meter capacity, a 3-axle covered truck and three additional aerial platforms!

These new resources significantly increase our lifting capacity and extend our range of action - enabling us to support even the most ambitious projects with greater power and flexibility. As David Clément, Process & Technical Manager at Mestel, summed it up at the end of the project: "Everything went perfectly, in a climate of trust and efficiency. If we had to do it again, we'd choose von Bergen without hesitation...", always: "between you and me".
